

EnviClin Touch

Economic Drycleaning Detergent for Optimum Cleaning Results of Textile Goods

EnviClin Touch is a cationic drycleaning detergent for use in all perchloroethylene drycleaning machines.

Due to renouncement of any filler material, the product is highly yielding.

Low dosage and high fibre affinity of the ingredients result in considerable reduction of the distillation sludge.

EnviClin Touch contains renewable and biodegradable raw materials and thus is gentle to human beings and the environment.

EnviClin Touch safely prevents electrostatic charges and lint formation on the textiles during drying.

Lint deposits inside the drycleaning machine will be greatly reduced by **EnviClin Touch**.

EnviClin Touch guarantees excellent drycleaning results, greying inhibition is optimized and defined colours are produced. Fibre-caring components provide the textiles with a pleasant soft handle.

EnviClin Touch markedly reduces finishing expenditure by its integrated active ironing aid.

Recommended Dosage: in case of 0,3 - 0,5 % of machine load capacity
3 - 5 ml of **EnviClin Touch** per kg of drycleaning goods

Application:

EnviClin Touch is used concentrated and suited for all dosing systems.

Prespotting:

For prespotting heavily soiled garments by prebrushing or spraying, we recommend to use our prespotting agents **Polysol odoSorb**, **Polysol RAN**, **Polysol Light** and the products of the **SEITZ – Spotting Kits**.

Storage conditions: To be stored in a cool and dry place, protected from frost.
Protect from heat and direct sunshine.
Keep container tightly closed.

Maximum storage time: 18 months
